2025 TO PRESENT · OD00

Enterprise Python and PostgreSQL

100+ client projects

Experience

Odoo PSAE, Software Engineer · Dubai

Apr 2025 to Present

- Python/PostgreSQL work on 100+ client projects: data models, business logic, database and performance fixes.
- Designed and built 5+ vertical modules now used by every client in their segments, cutting per-client customisation.
- Review partner code against Odoo standards; coach partner teams toward their BTCO/FTCO certifications.
- Star of the Month, July 2026.

Mandatory national service · Egypt

Aug 2023 to Dec 2024

Siemens EDA, Software Engineer, graduation project · Cairo (remote)

Jan 2023 to Aug 2023

E-Jam, a distributed test bench for network switches at Siemens Digital Industries Software; open source (MIT).

Team of five; top contributor, 256 commits · github.com/Abdaishere/E-Jam · walkthrough youtu.be/oPZLR4RM150

- Wrote Center Point, the Rust control plane on Actix Web: its REST API drives every stream, device and process through explicit state machines and publishes to Apache Kafka against a schema registry.
- Built the Flutter admin client that configures tests and charts results live.
- Team-built C++ packet generators and verifiers run per node in Docker; statistics stream back over Apache Kafka.
- **One switch test cycle went from 2 h+ to ~10 min**; 5+ manual test cases automated end to end with pass/fail.

Banque Misr, Android Developer Intern · Cairo

Jun 2022 to Aug 2022

- Kotlin/Java Android screens in MVVM; REST APIs for account and authentication; crash and performance fixes.

Projects

PolyBall, rhythm game; solo developer: design, code, audio, release

Godot 4 · GDScript · v0.10

- Google Play closed testing in 178 countries; trailer and browser build at <https://abdaishere.com/polyball/>.
- Audio engine synthesises every note at runtime: 16 additive voices, colour mapped to chord degree, no music files.
- CI across six targets on GitHub Actions, driven by bots playing 24 runs per pass with deliberate mistakes; 15 locales, Arabic right-to-left layout covered by automated tests.
- Opt-in telemetry; difficulty curve re-derived from real beta tap rates.
- Live leaderboard on Supabase with a monthly cup and server-side anti-cheat (exact score ceilings, run-code checks).

Education

Cairo University, B.Sc. Computers and Artificial Intelligence

2019 to 2023

GPA 3.5/4.0, Excellent with Honours, top 100 of 800+ · ICPC contestant (2021)

Skills

Languages: Rust, C++, Python, SQL, Java, Dart, GDScript, Kotlin

Systems: Apache Kafka, Docker, Linux, distributed test infrastructure

Backend: PostgreSQL, Actix Web, Spring Boot, Django, Odoo ORM, REST APIs

Shipping: GitHub Actions, cross-platform CI, Godot 4, Flutter

Spoken: Arabic (native), English (fluent)
